

What can you do with IFTTT and IntesisHome?

IFTTT allows you to connect IntesisHome to other devices and applications and to extend their operation with your Air Conditioning.

What can you do with IFTTT and IntesisHome?

TRIGGERS

Triggers are launchers that allow you to perform some action whenever a change occurs in your device. In addition to the triggers of IntesisHome you can use any trigger from other applications or devices connected to your IFTTT account.

- Turned ON: This Trigger fires every time your AC unit is turned ON.
- Turned OFF: This Trigger fires every time your AC unit is turned OFF.
- Temperature rises above: This Trigger fires every time your AC unit detects temperatures above a value you specify.
- Temperature drops below: This Trigger fires every time your AC unit detects temperatures below a value you specify.
- Device alert: This Trigger fires every time your AC unit has an alert message.

**If current temperature drops below specific level,
turn off A/C**

ACTIONS

These are the actions you can run whenever a change occurs in your device or applications connected to your IFTTT account.

- Turn ON: This Action will turn your IntesisHome AC ON.
- Turn OFF: This Action will turn your IntesisHome AC OFF.
- Execute scene: This Action will execute the indicated scene.
- Enable timer: This Action will enable the indicated timer.
- Disable timer: This Action will disable the indicated timer.

Ready-to-use recipes

We offer a set of recipes that we have prepared especially for you. A recipe is a combination of a trigger and an action that connects your IntesisHome with any IFTTT device or application.

The IFTTT page gives you more information on its operation and infinite possibilities.
